Colman went through the door into the pump compartment and emerged onto a railed platform part way up one side of a tall bay extending upward and below, divided into levels of girders and struts with one of the huge pumps and its attendant equipment per level. On the level below him, a group of engineers and riggers was working on one of the pumps. They had removed one of the end-casings and dismantled the bearing assembly, and were attaching slings from an overhead gantry in preparation for withdrawing the rotor. Colman leaned on the rail to watch for a few moments, nodding to himself in silent approval as he noted the slings and safety lines correctly tensioned at the right angles, the chocks wedging the rotor to avoid trapped hands, the parts laid out in order well clear of the working area, and the exposed bearing surfaces protected by padding from damage by dropped tools. It was impossible, but it had happened..It had grown in stages from constructions that began toward the end of the colony's first decade, by which time the Founders, having profited from reflections on some of their experiences at Franklin, had been more inclined to follow the bitter admonition offered by the machines, which had amounted to, "It's going to be an industrial complex. If you mess around with it,

won't work." The result was a clean, efficient, functional layout more in keeping with what the Kuan-yin's mission planners had envisaged, suitably modified where appropriate to take account of local conditions. Besides its industrial facilities, the complex included a seaport; an air and space terminal distributed mainly across the islands, which were interconnected by a network of tunnels; a college of advanced technology; and a small residential sector intended more to afford short- to medium-term accommodation for people whose business made it convenient for them to be in the vicinity than to house permanent inhabitants, although about half the population had been there for years. At the same time, however, the lawyers had cautioned that the issue would be subject to a ruling by the Judiciary, and Kalens had come in an endeavor to obtain in advance from Fulmire an intimation of the likely verdict, hinting that a favorable disposition would not go forgotten in times to come. The endeavor' had backfired spectacularly..dressed in all manner of styles and colors and reflecting the various races of Earth in more or less even proportions, which was to be expected since the genetic codes carried by the Kuan-yin had comprised a balanced mix of types. Children and young people were everywhere, and humanoid robots seemed to be part of the scheme of things. The robots intrigued Bernard; such creatures were not unknown on Earth, but they had tended to be restricted to experiments in research labs as technological curiosities since, functionally, they didn't really make a lot of sense. Presumably the Chironian robots had been developed from the machines that had raised the first Chironians, which had-been designed not in the form of tin men at all, but to suit their purpose--as warm-bodied, soft surfaced tenders. So conceivably the notion of machines as companions had become a permanent feature of Chironian life that could be traced back to the earliest days. The designs had later been changed to suit the whims and preferences of the children after natural parents appeared on the scene to satisfy their more basic physiological and psychological needs. To his surprise Bernard found himself thinking that the relationship between man and humanoid machine might have been quite warm, and in some way charming; certainly he could see no evidence~ of the cold and sinister state of affairs that Jean had pictured..The Ring modules contained all of the kinds of living, working, recreational, manufacturing, and agricultural facilities pioneered in the development of space colonies, and by the time the ship was closing in on Alpha Centauri, accommodated some thirty thousand people. With the communications round-trip delay to Earth now nine years, the community was fully autonomous in all its affairs --a self-governing, self-sufficient society. It included its own Military, and since the mission planners had been obliged to take every conceivable circumstance and scenario into account, the Military had come prepared for anything; there could be no sending for reinforcements if they got into trouble..Affixed to the door is a stainless-steel plaque with laser-cut letters:.potential wound..Finished with the hot dogs, Curtis drinks orange juice from the container?and realizes that Old Yeller is.thing?
